

OVERVIEW OF STRATEGIC INCOME

HIGHLIGHTS

- ▶ The Fort Washington Strategic Income strategy is a multi-sector fixed income strategy designed to provide investors with a high level of current income and total return with a focus on capital protection through multiple sources of returns.
- ▶ The strategy seeks to provide investors with premium yield and return through high-conviction security selection, dynamic sector allocations, prudent duration management, and a high-quality bias.
- ▶ The strategy invests across an expanded investment opportunity set with increased flexibility compared to traditional Core Fixed Income and Core Plus Fixed Income strategies.
- ▶ Fort Washington's unique approach utilizes cause-and-effect relationships to assess relative value between asset classes and balances interest rate risk with credit risk.
- ▶ The strategy is implemented by an experienced team of 30+ investment professionals with proven track records overseeing \$64.8 billion in fixed income assets.¹
- ▶ The strategy has produced competitive results, targeting an excess return of +300 basis points annually relative to the Bloomberg US Aggregate Bond Index.

HOW DOES STRATEGIC INCOME DIFFER FROM OTHER MULTI-SECTOR FIXED INCOME STRATEGIES?

Premium Yield With a Quality Bias

Strategic Income has delivered an above-average yield compared to its peers and traditional fixed income strategies, historically exceeding the Bloomberg US Aggregate Index by 2%. The strategy achieves this premium yield while maintaining an average credit rating of Investment Grade, distinguishing itself from peers that rely more heavily on High Yield securities.²

Enhanced Return

Strategic Income utilizes a broad investment universe to generate alpha across multiple sectors. The approach is designed to deliver enhanced portfolio diversification and differentiated patterns of returns. Since inception, the strategy ranks in the top quintile relative to peers and has exceeded the Bloomberg US Aggregate Index by an annualized 3.05% (net).³

High-Conviction Security Selection

Bottom-up security selection in fixed income has shown to be a reliable source of alpha. Strategic Income typically has 125–175 issuers, focusing on the best ideas from our deeply experienced team of sector specialists.

Diversification

Strategic Income avoids large concentrations in single sectors, such as high yield or preferred securities, while offering dedicated exposure to diversifying fixed-income asset classes with low correlation to traditional fixed income.

Duration Management

Multi-sector fixed income strategies commonly take large, and sometimes negative, duration positions. Strategic Income uses duration as a risk mitigation tool and seeks to avoid taking large duration positions due to the difficulty in predicting interest rates.

Flexibility & Expanded Opportunity Set

The strategy dynamically adapts to changing market conditions, capitalizing on niche opportunities to generate alpha. This flexible approach offers a meaningful advantage over more restrictive fixed-income strategies.

INVESTMENT PROCESS

The investment process is guided by a well-defined and consistent philosophy:

- ▶ The state of the economy and valuations drive asset prices.
- ▶ Relative value is best assessed through explicit measurement of risk and return.
- ▶ Active fixed income security selection adds alpha over time.
- ▶ Avoid large exposures not supported by strong investment rationale.

Incorporating these philosophical elements, the strategy employs a disciplined approach to sector allocation and relative value through a proprietary risk-management framework implemented by an experienced team with demonstrated experience in security selection.

The investment process can be summarized as follows:

1. Risk Appetite	<i>Determine how much risk to take</i>	▶ Risk budget target set based on the current state of the economy and asset valuations. ▶ Target risk levels applied to strategy and client-specific risk budgets.
2. Sector Allocation	<i>Identify optimal sector combinations</i>	▶ Make explicit estimates of risk and return for relative value assessment. ▶ Seek opportunities in niche markets.
3. Security Selection	<i>Perform fundamental analysis</i>	▶ Drive security selection decisions to "Sector PMs" (analyst level). ▶ Dedicated sector analysts focused on bottom-up fundamental analysis.
4. Risk Management	<i>Prudent monitoring of exposures</i>	▶ Continuous monitoring of risk, both top-down and bottom-up. ▶ Multiple layers of oversight.

ASSESSING RELATIVE VALUE BETWEEN ASSET CLASSES

The Fort Washington Strategic Income strategy takes the approach of a value investor, employing disciplined sector allocations and relative value analysis through a proprietary risk management framework. The explicit measurement of risk and return, combined with a prudent approach to portfolio construction throughout the cycle, is key to long-term success.

The team analyzes individual sectors on a risk-adjusted basis using proprietary tools, including qualitative and quantitative methods. Analysis is performed to determine a sector's potential excess return compared to the downside risk in a stress scenario. This allows for an apples-to-apples comparison of the risk-adjusted value between different asset classes. This forward-looking approach is differentiated in the marketplace because it is based on cause-and-effect relationships, whereas most investors rely on traditional techniques involving historical correlations and volatility.

MANAGING INTEREST RATE DURATION

Rather than taking large duration positions within the strategy, we use interest rate duration as a valuable risk mitigation tool. Interest rates often fall when risk assets sell-off, as investors flee to less risky assets such as Treasuries. By maintaining exposure to interest rate duration, the strategy has downside protection in volatile environments—a characteristic often desired when investing in fixed income. The strategy has historically been managed with a duration between 4 and 6 years.

THE INVESTMENT MANAGEMENT TEAM

The Strategic Income strategy is managed by a highly experienced and stable investment team of 30+ investment professionals averaging 19 years in the industry and 12 years with Fort Washington. The team manages \$64.8 billion in fixed income assets, including \$6.6 billion in multi-sector fixed income assets.

There are six senior portfolio managers responsible for the overall management of the strategy, with Daniel J. Carter, CFA, and Austin R. Kummer, CFA, serving as the Lead Portfolio Managers.

Dan Carter joined the Firm in 2000, and Austin Kummer joined the Firm in 2013. Both have led the strategy since its inception. This team sets the overall risk appetite, sector allocation, duration, and macro position of the portfolio (i.e., top-down positioning). This process is a collaborative effort including all members of the portfolio management team with input from all Fort Washington asset managers.

The Fort Washington Strategic Income strategy utilizes sub-sector portfolio managers (Investment Grade Corporate, High Yield, Securitized Products, Emerging Market Debt, etc.) for the composition of the sub-allocations (i.e., bottom-up positioning). These portfolio managers have discretion over their sub-portfolios subject to overall portfolio risk, sector constraints, duration risk, and other targets set by the portfolio management team (e.g., sector or duration may be constrained due to portfolio risk management).

Composite inception and creation date: 07/01/2017. ¹2017 returns are partial-year returns, reflecting the composite inception date of 07/01/2017. ²The 3-Year annualized ex-post standard deviation is calculated using monthly gross-of-fee returns to measure the average deviations of returns from its mean. ³Dispersion is not calculated for years in which the composite contains five portfolios or less. Dispersion is calculated as the equal weighted standard deviation of quarterly gross-of-fee returns for those portfolios held in the composite during the full measurement period. Past performance is not indicative of future results. ⁴The change in composite assets from 2021 to 2022 was the result of two accounts dropping below the \$100 million strategy minimum. The accounts continued to be managed in the style of the Strategic Income strategy and were returned to the composite in 2023 when their asset values once again exceeded the minimum threshold. The benchmark for this composite is the Bloomberg US Aggregate Bond Index. The Bloomberg US Aggregate Bond Index is a market capitalization-weighted index that measures the performance of the U.S. dollar-denominated, fixed-rate, taxable bond market. The index includes investment grade securities such as U.S. Treasuries, government-related and corporate bonds, mortgage-backed securities, asset-backed securities, and commercial mortgage-backed securities. The index accounts for interest payments by incorporating them into the total return calculation. The Strategic Income strategy employs a high conviction, yield oriented investment approach coupled with sector diversification and diligent risk management resulting in attractive risk adjusted returns via high levels of income. The primary objective of Strategic Income is to produce a high level of current income with a secondary objective of capital appreciation. The strategy will invest in public fixed income, private fixed income, common stock and derivatives. The strategy will incorporate the best investment ideas available to Fort Washington, exploiting Fort Washington's core competencies of bottom-up credit and structure analysis. Risk monitoring, performance measurement, and active management is a key component to achieving attractive risk adjusted returns. All fee-paying, fully discretionary portfolios managed in the Strategic Income style, with a minimum of \$100 million under our management, are included in this composite. The strategy's fee schedule is 0.40% for separate accounts. Portfolios in this composite include cash, cash equivalents, investment securities, interest and dividends. Cash is maintained, within each separately managed account segment, in accordance with our asset allocation ratio. The U.S. dollar is the base currency. The specific securities identified and described do not represent all the securities purchased, sold, or recommended. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. Net returns reflect the portfolio's gross returns with the deduction of expenses and other costs associated with the management of the investments in the portfolio as well as the deduction of the highest advertised fee rate for the applicable strategy shown. Individual portfolio returns are calculated on a daily valuation basis. Fort Washington Investment Advisors, Inc. (Fort Washington), a wholly owned subsidiary of The Western and Southern Life Insurance Company, is a registered investment advisor and provides discretionary money management to a broad range of investors, including both institutional and individual investors. Assets under management include all portfolios managed by Fort Washington and exclude assets managed by and marketed as its Private Equity business unit. Fort Washington claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS Standards. Fort Washington has been independently verified for the periods 07/01/1994-12/31/2024. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report. GIPS® is a registered trademark of CFA Institute. RISK DISCLOSURE

The Fort Washington Strategic Income strategy invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. The strategy invests in non-investment grade debt securities which are considered speculative with respect to the issuers' ability to make timely payments of interest and principal, may lack liquidity and has had more frequent and larger price changes than other debt securities. The strategy invests in mortgage-backed securities and asset-backed securities which are subject to the risks of prepayment, defaults, changing interest rates and at times, the financial condition of the issuer. The strategy invests in equities which are subject to market volatility and loss. The strategy invests in preferred stocks which are relegated below bonds for payment should the issuer be liquidated. The strategy invests in foreign securities which carry the associated risks of economic and political instability, market liquidity, currency volatility and accounting standards that differ from those of U.S. markets and may offer less protection to investors. The strategy invests in derivatives such as futures contracts. Derivatives can be highly volatile, illiquid and difficult to value, subject to counterparty and leverage risks and there is risk that changes in the value of a derivative held by the strategy will not correlate with the strategy's other investments. The strategy invests in mortgage dollar rolls which involve increased risk and volatility, as the securities the strategy is required to repurchase may be worth less than the securities that the strategy originally held.
