FORT WASHINGTON CORE FIXED INCOME — 2Q2025

PORTFOLIO COMMENTARY

The Fort Washington Core Fixed Income strategy returned 1.49% gross and 1.42% net for the quarter, outperforming the Bloomberg US Aggregate Index which returned 1.21%.

The strategy's sector allocation was the largest contributor to relative performance during the quarter due to an overweight allocation to credit, primarily investment grade corporates. Corporate spreads tightened over the quarter which positively impacted performance.

Security selection also contributed positively to relative performance during the quarter, driven by the securitized sector. Within securitized, the strategy was overweight non-agency CMBS which outperformed over the period as spreads tightened.

The strategy's interest rate exposure had a neutral impact to relative performance. The strategy tactically adjusted duration positioning over the quarter which performed in line with the benchmark as interest rates experienced volatility and the 10-year Treasury ended the period unchanged.

Trailing Total Returns (as of June 30, 2025)

Core Fixed Income (Gross)	1.49	6.63	3.76	-0.01	2.62	3.83
Core Fixed Income (Net)	1.42	6.31	3.45	-0.31	2.31	3.52
Bloomberg US Aggregate Index	1.21	6.08	2.55	-0.73	1.76	3.09

Inception date: 07/01/2005. Source: Fort Washington Investment Advisors. Past performance is not indicative of future results. This supplemental information complements the Core Fixed Income GIPS Report.

POSITIONING

Risk budget: The strategy is targeting a modest overweight to risk representing 40% of the risk budget.

Despite modestly cheaper valuations since the beginning of the year, current levels are still expensive relative to history. Incorporating our macroeconomic outlook and elevated uncertainty, portfolios are positioned with a modest overweight risk posture and an ability to add risk as opportunities arise.

Sectors: Sector positioning reflects current valuations, relative value, and opportunities within each sector. Sector allocations were generally unchanged in the quarter. Primary risk exposures include:

- ▶ The strategy remains overweight Investment Grade Credit (IG). Within the IG allocation, the strategy is increasingly weighted toward liquid, higher quality issues. We are maintaining a risk overweight to select sectors where compelling bottom-up opportunities exist such as midstream and banks.
- ▶ Securitized Products remain an overweight exposure relative to the benchmark, focused within AAA-rated non-agency CMBS and high quality RMBS. Spreads moved tighter over the quarter as trade tensions moderated and many non-agency sectors have moved back to levels that are tight of historical medians. Pockets of value still exist but as tight credit curves are not adequately compensating investors for risk, the exposure remains biased up-in-quality.

Rates: We are currently positioning portfolios generally neutral duration relative to the benchmark as uncertainty remains high and volatility persists. The yield curve steepened modestly during the quarter as forecasts for Fed cuts increased. Portfolios are also positioned neutral from a curve perspective relative to the index. Volatility has been elevated and we anticipate the magnitude of expected rate cuts will continue shifting with new economic data and developments around executive branch policies, presenting opportunities for tactical adjustments.

MARKET OVERVIEW

Uncertainty that unsettled investors in Q1 extended into the second quarter. Escalating tariff policies peaked on April 2—dubbed “Liberation Day”—with the announcement of reciprocal tariffs on all trading partners. A reprieve followed a week later, which provided relief to markets and lowered the chances of an immediate growth shock. However, it did little to clarify the outlook for consumers and businesses regarding spending, capital expenditures, or hiring plans.

Despite softening sentiment, economic fundamentals remained resilient. Retail sales continued to grow, albeit with volatility driven by tariff-related front-running. The labor market remains largely balanced with the U.S. adding jobs and consumers experiencing real wage growth. However, a rising personal savings rate suggests consumers are preparing for potential policy shocks. Meanwhile, housing remains a persistent drag due to extremely challenging affordability as mortgage rates and home prices stay high.

Looking ahead, growth expectations for 2025 and 2026 have been revised downward due to continued uncertainty. Should this uncertainty persist, it may begin to reflect in weaker economic data. However, the recent passage of the reconciliation package—“One Big, Beautiful Bill”—is likely to provide a modest boost to economic activity in the short term, via extended tax cuts and incentives for capital expenditures through accelerated depreciation.

Markets were volatile but ended Q2 appearing cautiously optimistic. The S&P 500 briefly entered bear market territory in early April but rebounded to end the quarter at all-time highs. Credit spreads followed a similar trajectory, widening initially before tightening meaningfully through the rest of the quarter, ending tight of historical averages. This shift in investor tone, alongside easing near-term inflation concerns, led to a steeper yield curve, while the 10-year Treasury remained largely unchanged.

MACRO OUTLOOK | AS OF 06/30/2025

Factor	Outlook	Comments
Economic Growth	Neutral	<ul style="list-style-type: none"> Growth expectations have fallen due to shifting trade policy leading to softer sentiment across businesses and consumers. In aggregate, the consumer has a solid foundation, but their outlook remains fragile. Overall business fundamentals generally healthy but trade policy creates uncertainty for capital investment and hiring. Market forecasts for inflation have increased due to tariffs, but impacts are not expected to be persistent. Economic and fiscal effects of tariffs and budget reconciliation will be the policy focus over coming quarters.
Financial Conditions	Neutral	<ul style="list-style-type: none"> Terminal rate expectations continue shifting, markets anticipate multiple cuts each in 2025 and 2026. Volatility to remain elevated as markets react to incoming data and policy response. Lending standards and market-based financial conditions are largely neutral.
Valuations	Credit: Expensive	<ul style="list-style-type: none"> Spreads continued tightening from the April highs and are back to historically tight levels. Default risk low but downside risk remains elevated with limited margin of safety.
	Equities: Neutral	<ul style="list-style-type: none"> Equity markets back to highs despite April volatility. Valuations are back to levels comfortably above long-term averages but growth expectations supportive.
	Rates: Positive	<ul style="list-style-type: none"> Interest rates reasonably priced at current levels. Yields reflect further interest rate cuts from the Fed and benign long-term inflation expectations.
Risk Budget		Summary

40%

The U.S. economy entered the year on solid footing, but growth forecasts have declined in recent months. Shifting trade policy and escalating geopolitical tensions have created elevated uncertainty along with weaker sentiment across consumers and businesses. While the market expects tariffs to increase inflation, the impacts are expected to be relatively short-lived. Corporate fundamentals remain generally healthy, but the current environment creates uncertainty over CAPEX and hiring. As a result, investors anticipate slower growth and ongoing Fed rate cuts, expecting multiple cuts each in 2025 and 2026. Given the swift recovery of financial markets, equity and credit valuations remain elevated compared to long-term averages and offer limited margin of safety. Current valuations, coupled with elevated economic risks, result in a modest allocation to credit risk.

Composite inception date: 07/01/2005. Composite creation date: 07/01/2015. ¹The 3-Year annualized ex-post standard deviation is calculated using monthly gross-of-fee returns to measure the average deviations of returns from its mean. ²Dispersion is not calculated for years in which the composite contains five portfolios or less. Dispersion is calculated as the equal weighted standard deviation of gross-of-fee returns for those portfolios held in the composite during the entire period. Past performance is not indicative of future results. The benchmark for this composite is the Bloomberg US Aggregate Bond Index. The Bloomberg US Aggregate Bond Index is a market capitalization-weighted index that measures the performance of the U.S. dollar-denominated, fixed-rate, taxable bond market. The index includes investment grade securities such as U.S. Treasuries, government-related and corporate bonds, mortgage-backed securities, asset-backed securities, and commercial mortgage-backed securities. The index accounts for interest payments by incorporating them into the total return calculation. Fort Washington's Core Fixed Income strategy uses explicit measures of value and risk as a guide to investment decisions. Combined with intensive fundamental research, the portfolio management team believes this provides the best opportunity for excess return. All fee-paying, fully discretionary portfolios managed in the Core Fixed Income style, with a minimum of \$5 million under our management, are included in this composite. Effective 07/01/2024, includes all fixed income accounts above \$5MM primarily invested in investment grade securities of the major fixed income sectors such as government, corporate, and mortgage-backed across all maturities with limited use of non-investment grade securities. The Core Fixed Income style requires investors to have the ability to invest in Investment Grade Securities and allow up to 10% allocations in High Yield. The strategy's fee schedule is 0.30% on the first \$25 million and 0.25% on additional amounts over \$25 million. Portfolios in this composite include cash, cash equivalents, investment securities, interest and dividends. Cash is maintained, within each separately managed account segment, in accordance with our asset allocation ratio. The U.S. dollar is the base currency. The specific securities identified and described do not represent all of the securities purchased, sold, or recommended. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. Net returns reflect the portfolio's gross returns with the deduction of expenses and other costs associated with the management of the investments in the portfolio as well as the deduction of the highest advertised fee rate for the applicable strategy shown. Individual portfolio returns are calculated on a daily valuation basis. Fort Washington Investment Advisors, Inc. (Fort Washington), a wholly owned subsidiary of The Western and Southern Life Insurance Company, is a registered investment advisor and provides discretionary money management to a broad range of investors, including both institutional and individual investors. Assets under management include all portfolios managed by Fort Washington and exclude assets managed by and marketed as its Private Equity business unit. Fort Washington claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS Standards. Fort Washington has been independently verified for the periods 07/01/1994-12/31/2023. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. RISK DISCLOSURE

The Fort Washington Core Fixed Income strategy invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. The strategy invests in mortgage-backed securities and asset-backed securities which are subject to the risks of prepayment, defaults, changing interest rates and at times, the financial condition of the issuer.
