FORT WASHINGTON INTERMEDIATE FIXED INCOME – 4Q2025

PORTFOLIO COMMENTARY

The Fort Washington Intermediate Fixed Income strategy returned 1.31% gross and 1.22% net for the quarter, underperforming the Bloomberg US Aggregate Intermediate Bond Index, which returned 1.35%.

The strategy's sector allocation had a largely neutral impact on relative performance during the quarter, as spreads were generally range bound.

Security selection detracted modestly from relative performance during the quarter, driven primarily by Securitized exposure. Underperformance within Securitized was largely due to an underweight position in Agency RMBS, which outperformed over the period.

The strategy's interest rate exposure also had a marginally negative impact on relative performance. Duration positioning was tactically adjusted throughout the quarter; however, the portfolio was positioned longer duration relative to the benchmark on average, which detracted from performance as longer-term rates rose while shorter-term rates declined.

Trailing Total Returns (as of December 31, 2025)

■ Intermediate Fixed Income (Gross)	1.31	8.12	6.00	1.52	3.13	3.80
■ Intermediate Fixed Income (Net)	1.22	7.75	5.63	1.17	2.77	3.43
■ Bloomberg US Agg Intermediate Bond	1.35	7.45	5.01	0.68	2.06	3.16

Source: Fort Washington. Past performance is not indicative of future results. This supplemental information complements the Intermediate Fixed Income GIPS Report. Inception date: 01/01/2006.

POSITIONING

Risk budget: The strategy is targeting a modest overweight to risk, representing 40% of the risk budget.

Current valuations are at levels that are tight relative to history. Incorporating our macroeconomic outlook and elevated uncertainty, portfolios are positioned with a modest overweight risk posture and the flexibility to add risk as opportunities arise.

Sectors: Sector positioning reflects current valuations, relative value, and opportunities within each sector. Allocations were mostly unchanged during the quarter, and primary risk exposures include:

- ▶ The strategy remains overweight Investment Grade Credit (IG). Within the IG allocation, the portfolio is weighted toward liquid, higher-quality issues while preserving a spread advantage relative to the index. We are maintaining a risk overweight to select sectors where we believe compelling bottom-up opportunities exist, such as Midstream and Banks. In addition, the allocation is underweight the Technology sector, as heavy expected issuance is likely to pressure spreads and create more attractive opportunities in the future.

- ▶ Securitized Products remain an overweight exposure relative to the benchmark, focused on AAA-rated non-agency CMBS and high-quality RMBS. Spreads were generally range bound over the quarter, but many non-agency sectors remain at levels that are tight relative to historical medians. The exposure remains biased up in quality, as tight credit curves are not adequately compensating investors for risk, although pockets of value still exist.
- ▶ The strategy opportunistically trimmed some exposure to High Yield Corporates during the quarter. Spreads have tightened meaningfully since the volatility in April, and current levels are tight relative to historical averages.

Rates: We are currently positioning portfolios generally long duration relative to the benchmark, as we view longer-term real yields as attractive. The yield curve steepened modestly during the quarter as the Federal Reserve (Fed) cut rates while longer-term rates increased modestly. Portfolios are positioned largely neutral from a curve perspective relative to the index. Volatility has subsided over the past year; however, we anticipate the timing of future rate cuts will continue to shift with new economic data and developments around executive-branch policies, presenting opportunities for tactical adjustments.

MARKET OVERVIEW

As we turn to a new year, the investment landscape remains marked by lingering uncertainty, though optimism around 2026 has been building. Despite headwinds from trade policy and geopolitical tensions, the U.S. economy has remained resilient in recent quarters. The primary drivers of growth have been strong personal consumption—supported by higher-income consumers and the “wealth effect”—alongside continued investment in artificial intelligence infrastructure. Investors expect both to remain key growth catalysts into 2026.

The Fed built on its September rate cut by delivering two additional 25-basis-point reductions at the final meetings of the year. A weakening employment picture prompted the Federal Open Market Committee (FOMC) to move policy closer to neutral. However, divisions among members have grown, with concerns over downside risks to the labor market at odds with views that the economy could still experience upside inflation surprises. While recent reports show inflation plateauing, goods prices appear the most likely source of higher-than-expected inflation, given ongoing tariff pressures and a pending Supreme Court ruling on their legality.

Following stronger-than-expected 4.3% GDP growth in Q3, the economy is projected to see a modest slowdown in Q4. This is largely due to the temporary drag from the U.S. government shutdown, with growth expected to normalize in Q1 2026. Beyond weighing on activity, the shutdown has complicated the interpretation of economic data due to missing inputs and delayed releases. As these effects dissipate, tax policy remains a potential tailwind, as accelerated depreciation should boost capital expenditures and individual tax cuts should support consumer spending. That said, job creation has slowed meaningfully and could begin to pressure consumption should unemployment rise further.

As rate cuts eased financial conditions and market fundamentals remained healthy, the S&P 500 continued to reach new highs over the quarter. Closing the year with an annual return of 17.9%, this marked a third consecutive year of double-digit gains for the index. Credit spreads were largely range bound during the quarter and remain near historically tight levels. Expectations for additional rate cuts in 2026, alongside benign long-term inflation expectations, contributed to a steepening yield curve over the quarter, despite the 10-year Treasury ending largely unchanged at 4.17%.

MACRO OUTLOOK | AS OF 12/31/2025

Factor		Outlook	Comments
Economic Growth	Neutral		<ul style="list-style-type: none">U.S. growth is expected to remain below trend amid shutdown-related impacts, but expectations for 2026 have improved as tariff headwinds dissipate and easier financial conditions should contribute to a broadening of the economy.The labor market has slowed, but high-income consumers continue to drive personal consumption.Business fundamentals remain generally healthy, and CAPEX expectations have increased.Goods inflation has moved higher, while services inflation remains range bound; modest growth should help contain overall inflation.
Financial Conditions	Neutral		<ul style="list-style-type: none">Federal Reserve (Fed) officials cut rates by 75 basis points across the final three meetings of 2025 and are expected to pause in January.Terminal rate expectations continue to fluctuate around 3%, with investors anticipating two additional cuts through 2026.Lending standards and market-based financial conditions have eased following rate cuts.
Valuations	Credit: Expensive		<ul style="list-style-type: none">Credit spreads have been largely range bound, with current levels expensive relative to history.Default risk remains low, but downside risk is elevated given a limited margin of safety.
	Equities: Neutral		<ul style="list-style-type: none">Equity markets remain near all-time highs, driven by robust consumer spending and AI investment.Valuations are above long-term averages, though growth expectations remain supportive.
	Rates: Neutral		<ul style="list-style-type: none">Interest rates are largely within our fair-value range, but we believe longer-term real yields remain attractive at current levels. Yields reflect expectations for further Fed rate cuts and benign long-term inflation.
Risk Budget		Summary	

30%	U.S. economic growth is expected to soften in Q4 due to the government shutdown, but expectations for 2026 call for trend growth as easier financial conditions contribute to a broadening of the economy. However, uncertainty remains elevated amid weak job growth, shifting trade policy, and geopolitical tensions, resulting in softer sentiment. Consumer spending remains bifurcated, with higher-income cohorts driving consumption. Market expectations are for inflation to gradually decline, with forecasts pointing to mid-2% inflation by the end of 2026. Corporate fundamentals remain generally healthy, and CAPEX expectations have improved. The Federal Open Market Committee (FOMC) has cut rates by 75 basis points this year, and markets expect two additional cuts through 2026. Credit valuations remain elevated compared with long-term averages and offer a limited margin of safety. Current valuations, coupled with elevated economic risks, support a modest allocation to credit risk.

Composite inception date: 01/01/2006. Composite creation date: 01/01/2018. ¹The 3-Year annualized ex-post standard deviation is calculated using monthly gross-of-fee returns to measure the average deviations of returns from its mean. ²Dispersion is not calculated for years in which the composite contains five portfolios or less. Dispersion is calculated as the equal weighted standard deviation of quarterly gross-of-fee returns for those portfolios held in the composite during the full measurement period. Past performance is not indicative of future results. The benchmark for this composite is the Bloomberg US Aggregate Intermediate Bond Index. The Bloomberg US Aggregate Intermediate Bond Index measures the performance of the investment grade, fixed-rate taxable bond market and includes government and corporate bonds, agency mortgage-backed, asset-backed securities, and commercial mortgage-backed securities (agency and non-agency) with a maturity greater than 1 year and less than 10 years. The index accounts for interest payments by incorporating them into the total return calculation. Fort Washington's Intermediate Fixed Income strategy seeks to actively manage portfolios within a disciplined sector rotation and target duration framework, focusing on long-term results, utilizing a mix of fixed income securities. Fort Washington constructs portfolios that are diversified by sector, holdings, and quality which we believe will produce favorable risk-adjusted returns. The Intermediate Fixed Income Composite includes all fixed income accounts above \$5 million managed to the maturity constraints consistent to that of an intermediate duration focused index, with the ability to invest in Investment Grade Securities which allow for between 10%-30% allocations to High Yield and/or are restricted to invest in less than 5% in Emerging Market Securities, Non-U.S. Dollar denominated securities, and/or any derivative investments. The strategy's fee schedule is 0.35% on the first \$25 million and 0.30% on additional amounts over \$25 million for separate accounts. Portfolios in this composite include cash, cash equivalents, investment securities, interest and dividends. Cash is maintained, within each separately managed account segment, in accordance with our asset allocation ratio. The U.S. dollar is the base currency. The specific securities identified and described do not represent all of the securities purchased, sold, or recommended. Returns are presented gross and net of management fees and include the reinvestment of all income. Gross returns will be reduced by investment advisory fees and other expenses that may be incurred in the management of the account. Net returns reflect the portfolio's gross returns with the deduction of expenses and other costs associated with the management of the investments in the portfolio as well as the deduction of the highest advertised fee rate for the applicable strategy shown. Individual portfolio returns are calculated on a daily valuation basis. Fort Washington Investment Advisors, Inc. (Fort Washington), a wholly owned subsidiary of The Western and Southern Life Insurance Company, is a registered investment advisor and provides discretionary money management to a broad range of investors, including both institutional and individual investors. Assets under management include all portfolios managed by Fort Washington and exclude assets managed by and marketed as its Private Equity business unit. Fort Washington claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS Standards. Fort Washington has been independently verified for the periods 07/01/1994-12/31/2024. The verification reports are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. RISK DISCLOSURE

The Fort Washington Intermediate Fixed Income strategy invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. Events in the U.S. and global financial markets, including actions taken to stimulate or stabilize economic growth may at times result in unusually high market volatility, which could negatively impact strategy performance and cause it to experience illiquidity, shareholder redemptions, or other potentially adverse effects. Banks and financial services companies could suffer losses if interest rates rise or economic conditions deteriorate.
