

Fund Manager Commentary

As of December 31, 2020

Fund Highlights

- Pursues its objective by seeking to track the net total return, before fees and expenses, of the TOBAM Anti-Benchmark® US Core Equity Index¹ (the Index)
- The Index is a proprietary rules-based index created by the Fund's sub-advisor, TOBAM S.A.S. (TOBAM) which is designed to create a more diversified portfolio of U.S. equity securities relative to traditional market capitalization weighted benchmarks
 - The Index is based on TOBAM's proprietary quantitative model, which selects and weights companies to maximize diversification. TOBAM quantitatively selects securities, subject to certain constraints, that maximize the portfolio's Diversification Ratio², a patented, proprietary mathematical metric based on the volatility of the Index constituents and their correlation to the other Index constituents. Constraints include a minimum and maximum weight for any given stock. TOBAM's Anti-Benchmark® strategy seeks to avoid the concentration risk that exists in traditional market capitalization-weighted indices through its quantitative approach to diversification. The Index will typically hold approximately 70 to 100 securities. The Index typically is reconstituted (i.e. Index constituents are added or deleted and weights are reset) monthly. The Fund will be rebalanced following the same schedule as the Index
- The Fund intends to fully replicate the Index to achieve its investment objective, meaning the Fund will generally invest in all of the component securities of the Index in the same approximate proportions as the Index
- The equity securities that comprise the Index primarily include common and preferred stock

Market Recap

The fourth quarter of 2020 ended a tumultuous year on a high note. Third quarter U.S. gross domestic product (GDP) data released in October indicated the largest growth rate (33.4 percent annualized) ever recorded while U.S. unemployment continued its decline from 7.9 percent in September to 6.7 percent in November. Despite a hotly contested presidential election and a spike in COVID-19 cases leading to a reimplementing of economic lockdowns, U.S. capital markets continued to climb during the quarter as vaccine trial results gave investors reason for optimism. Outside the U.S., economic growth was relatively benign as GDP growth rates in the European Union (EU), Japan and the U.K. rebounded in the third quarter, but not as strongly as in the U.S. Garnering less investor attention was the official British exit from the EU, also known as Brexit, which occurred at midnight on December 31, ending a long saga of negotiation breakdowns and changes in U.K. political leadership.

U.S. equity markets generated strong returns during the fourth quarter and for calendar year 2020. Strong leadership among small cap equities, regardless of style, outperforming their mid cap and large cap brethren was reported. From a style standpoint, value equities outperformed growth and core, across the market capitalization spectrum. A notable shift occurred in equity style where value equities outperformed growth following multiple quarters of strong growth equity performance compared to value equities. However, growth equities, and their lower exposure to

pandemic-sensitive cyclicals, financials, and energy segments of the U.S. economy, was a net beneficiary in 2020 as they far outpaced value equities over the full calendar year.

Portfolio Review

The Touchstone Anti-Benchmark® U.S. Core Equity Fund (Class Y Share) underperformed its benchmark, the Russell 1000® Index, for the quarter ended December 31, 2020.

Despite the COVID-19 virus spread not being contained in the U.S., investor's regained confidence. This translated into a steep rebound for the remainder of the year in broad market returns, culminating in strong broad market performance in the fourth quarter. Cyclical and growth-oriented sectors led the market during the quarter. Energy, Financials, Materials, Industrials and Communication Services sectors all posted strong returns. This contributed to even higher levels of market concentration in the U.S. equity market at year-end. The Financials and Energy sectors specifically rebounded over the last two months of the year after vaccine excitement started to be priced in to the market and a slow cool down of the oil price war helped to stabilize oil prices. While Energy, Financials and Industrials sectors led the market, the Fund underperformed these sectors due to stock selection in the Energy sector and an underweight and stock selection within Financials and Industrials. An overweight position and poor stock selection

¹ Effective October 3, 2020, the Touchstone Dynamic Equity Fund was renamed the Touchstone Anti-Benchmark® US Core Equity Fund, and its principal strategies were changed and TOBAM S.A.S. was appointed sub-advisor.

Performance data quoted represents past performance, which is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than performance data given. **For performance information current to the most recent month-end, visit TouchstoneInvestments.com/mutual-funds.**

within the Consumer Staples sector was the largest detractor to fund performance during the quarter. This was offset slightly by strong stock selection within Communication Services sector.

Outlook and Conclusion

TOBAM's Anti-Benchmark® strategy does not forecast but simply seeks to maximize diversification. Thus, it does not include fundamental analysis of individual stocks, countries, sectors, economic environments or factors. No discretionary tactical or strategic asset allocation decisions are made with respect to specific regions, sectors or industries. TOBAM's investment process consists of maximizing diversification from a bottom-up perspective. Securities are bought or sold solely in relation to their potential relative diversification benefits within the portfolio. A security will be completely sold when it no longer provides the most marginal diversification among all available stocks in the universe, and others purchased when they begin to provide more marginal diversification. TOBAM's patented Anti-Benchmark® approach is designed to avoid explicit and implicit biases in terms of sector, style, market cap and other statistical measures. For this reason, we apply as few constraints as possible and do not rely on any given view or forecast, in order to avoid unwanted systematic exposures. The Fund's portfolio reflects even risk contributions from all independent effective risk factors in the investment universe, which may include sector and country factors.

Fund Facts (As of 12/31/20)

Class	Inception Date	Symbol	CUSIP	Annual Fund Operating Expense Ratio*	
				Total	Net
A Shares	10/02/20	TDEAX	89154X195	1.26%	0.79%
C Shares	10/02/20	TDECX	89154X187	2.24%	1.54%
Y Shares	11/18/18	TDEYX	89154X179	0.79%	0.54%
INST Shares	11/18/18	TDELX	89154X161	0.71%	0.44%
Total Fund Assets	\$48.7 Million				

*Expense ratio is annualized. Data as of the current prospectus. Touchstone Advisors has contractually agreed to waive a portion of its fees and/or reimburse certain Fund expenses in order to limit certain annual fund operating expenses (excluding Acquired Fund Fees and Expenses "AFFE," and other expenses, if any) to 0.79% for Class A Shares, 1.54% for Class C Shares, 0.54% for Class Y Shares and 0.44% for Class INST Shares. These expense limitations will remain in effect until at least 10/29/21.

Share class availability differs by firm.

A Word About Risk

The Fund invests in equities which are subject to market volatility and loss. The Fund invests in preferred stocks which are relegated below bonds for payment should the issuer be liquidated. If interest rates rise, the fixed dividend on preferred stocks may be less attractive, causing their price to decline. As the Fund is intended to track the Index, portfolio managers do not attempt to take defensive positions under any market conditions, including during declining markets. TOBAM uses proprietary statistical analyses and models to construct the Index, which the Fund seeks to track. A securities portfolio selected using TOBAM's proprietary models can perform differently than the market as a whole as a result of the correlation factors used in the analysis to construct the models, the weight placed on each factor, and changes in the factors' historical trends. As a result, the Fund may be more or less exposed to a risk factor than its individual holdings. Quantitative models are subject to technical issues including programming and data inaccuracies, are based on assumptions, and rely on data that is subject to limitations (e.g., inaccuracies, staleness), any of which could adversely affect their effectiveness or predictive value. The performance of the Fund and its Index may differ from each other for a variety of reasons. The Advisor engages a sub-advisor to make investment decisions for the Fund's portfolio; it may be unable to identify and retain a sub-advisor who achieves superior investment returns relative to other similar sub-advisors. Events affecting the financial markets, such as a health crisis, may at times result in unusually high market volatility, which could negatively impact Fund performance and cause it to experience illiquidity, shareholder redemptions, or other potentially adverse effects.
