[^]The ICE BofA Merrill Lynch 3-Month U.S. Treasury Bill Index is an unmanaged index of Treasury securities maturing in 90 days that assumes reinvestment of all income.

The indexes mentioned are unmanaged statistical composites of stock market or bond market performance. Investing in an index is not possible. Unmanaged index returns do not reflect any fees, expenses or sales charges.

Performance data quoted represents past performance, which is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than performance data given. **For performance information current to the most recent month-end, visit TouchstoneInvestments.com/mutual-funds.** From time to time, the investment advisor may waive some fees and/or reimburse expenses, which if not waived or reimbursed, will lower performance. Performance by share class will differ due to differences in sales charges and class expenses. Calendar year returns of the Fund and the Benchmark do not include the effects of the applicable sales charge which would lower returns. Returns assume reinvestment of all distributions. Returns are not annualized for periods less than one year.

Yield - Class A Shares (As of 06/30/19)**

	Touchstone Credit Opportunities II Fund
30-Day SEC Yield	4.83%
30-Day Unsubsidized [†] SEC Yield	-2.69%

[†]Unsubsidized is calculated without expense waivers. **The 30-Day SEC Yield** is calculated by dividing the net investment income per share (as defined by industry regulations) earned by a fund over a 30-day period by the maximum public offering price. This number is then annualized. **The 30-Day SEC Yield** reflects the rate at which a fund is earning income on its current portfolio of securities and does not necessarily reflect income actually earned and distributed by a fund and, therefore, may not be correlated with a fund's past distributions actually paid to shareholders.

**The inception date of the Touchstone Credit Opportunities II Fund is August 31, 2015. It is anticipated that the Fund's 30-Day Unsubsidized SEC yield should normalize as the Fund grows.

[◊]Prior to September 9, 2019, the performance history is that of the Touchstone Credit Opportunities Fund.

Objective

The Fund seeks absolute total return, primarily from income and capital appreciation by investing primarily in global debt securities.

Investment Style

- Employs flexibility by allocating assets among core investments and opportunistic investments as market conditions change
- Identifies companies and securities that are believed to offer attractive relative values when compared to their fundamental credit risk
- Actively hedges portfolio risks, including credit, interest rate and currency, in an effort to preserve capital
- Consists of several broad investment categories, including high yield bonds, bank loans, special situations, structured credit and hedges

*Data may not total due to rounding. The ratings agencies that provided the ratings are Standard & Poor's and Moody's Investors Service. When ratings vary, the highest rating is used. Credit ratings of A or better are considered to be high credit quality; credit ratings of BBB are good credit quality, and the lowest category of investment grade; credit ratings BB and below are lower-rated securities ("junk bonds"); and credit ratings of CCC or below have high default risk. Where no rating has been assigned, it could be for reasons unrelated to the creditworthiness of the issuer. The credit quality ratings apply only to the credit worthiness of the issuers of the underlying securities and not the fund or its shares. Ratings are subject to change.

A Word About Risk

The Fund invests in fixed-income securities which can lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. When interest rates rise, the price of debt securities generally falls. Longer term securities are generally more volatile. The Fund invests in non-investment grade debt securities, distressed securities and corporate loans which are considered speculative with respect to the issuers' ability to make timely payments of interest and principal, may lack liquidity and have more frequent and larger price changes than other debt securities. There is a high risk that the Fund could suffer losses from investments in non-investment grade debt securities caused by the default of an issuer. The Fund invests in Collateralized Loan Obligations (CLOs) that have risks that largely depend on the type of underlying collateral and risks may include illiquidity, limited active market, the possibility that distributions from collateral securities will be insufficient to make interest or other payments, the potential for a decline in the quality of the collateral, and can bear the risk of default by the loans. The Fund invests in convertible securities which are subject to the risks of both debt securities and equity securities. The Fund invests in equities which are subject to market volatility and loss. The Fund invests in preferred stocks which are relegated below bonds for payment should the issuer be liquidated. The fixed dividend may be less attractive in a rising interest rate market. The Fund invests in foreign securities which carry the associated risks of economic and political instability, market liquidity, currency volatility and accounting standards that differ from those of U.S. markets and offer less protection to investors. The Fund invests in derivatives and securities such as futures contracts, options and swap agreements including those based on the London Interbank Offered Rate (LIBOR). Derivatives can be highly volatile, illiquid and difficult to value, subject to counterparty and leverage risks and there is risk that changes in the value of a derivative held by the Fund will not correlate with the Fund's other investments. Gains or losses from speculative positions in a derivative may be much greater than the original cost and potential losses may be substantial. The Fund is involved in short selling which may result in additional costs associated with covering short positions and a possibility of unlimited loss. Certain Touchstone funds-of-funds may invest in the Fund. Purchases, redemptions, and underlying allocations may require the Fund to take actions when it otherwise would not do so. This could adversely affect performance. The Fund is non-diversified, which means that it may invest a greater percentage of its assets in the securities of a limited number of issuers and may be subject to greater risks. Current and future portfolio holdings are subject to risk. The Advisor engages a sub-advisor to make investment decisions for the Fund's portfolio; it may be unable to identify and retain a sub-advisor who achieves superior investment returns relative to other similar sub-advisors.
