

## Fund Manager Commentary

As of June 30, 2023

### Fund Highlights

- Targets goals through a short duration, low risk approach
- Emphasizes mortgage-backed and asset-backed securities, which are backed by income-producing assets; inefficiencies in these markets make them attractive for active management
- Seeks to keep duration less than a year, which reduces duration risk compared to longer duration portfolios
- Higher credit quality portfolio seeks to avoid higher risk strategies, such as non-dollar currencies and lower quality credits
- Seeks to complement more “opportunistic” fixed income, equity or hedge fund strategies

### Market Recap

The second quarter of 2023 witnessed the U.S. economy’s resilience and slow progress in reducing inflation, resulting in strong performance for risk assets, increased expectations of hawkish U.S. Federal Reserve (Fed) policies, and higher interest rates. While economists had predicted a recession, incoming data showed a robust labor market that supported consumer spending. Short-term rates rose more than long-term rates, leading to a more inverted yield curve. The Fed adjusted its expectations due to concerns about persistent high inflation, leading to a “higher for longer” path of Fed policy, with rates expected to remain unchanged until at least mid-2024.

Consensus expectations shifted from recession fears to a soft landing for the U.S. economy, driven by the resilience of the U.S. consumer. Consumer spending, which represents a significant portion of the economy, remained solid despite higher rates and other headwinds, thanks to a healthy labor market, above-average wage gains, and excess savings. However, downside risks remain as the effects of Fed tightening, credit constraints by banks, and depletion of excess savings start to affect the economy.

Business spending, especially in the manufacturing sector, continued to face challenges, with manufacturing surveys indicating near-zero growth or declines in activity. The service sector fared better, but risks aligned with those faced by consumers. Global growth moderated compared to the first quarter, posing potential downside risks. The U.K. and Eurozone economies face challenges due to further rate hikes as inflation remained sticky. China’s growth remained uneven and disappointing as it struggled to gain momentum after the COVID pandemic. Inflation from the

manufacturing sector normalized as commodities declined, and supply chains stabilized, aiding in reducing overall inflation rates throughout 2023.

U.S. headline inflation fell sharply in the first half of 2023. The Consumer Price Index declined from a peak of nearly 9% in 2022 to slightly above 4% in the most recent data. Core measures, excluding food and energy, adjusted lower but at a slower pace. The Fed’s preferred measure, core personal consumption expenditures peaked at 5.4% in 2022 but only declined to 4.6%. Progress in controlling inflation in the goods sector was significant, but the service sector remained sticky. However, service sector inflation is expected to decrease over the next few months, especially in shelter inflation, which is the largest component of services inflation.

The Fed raised rates in May, decided against another hike in June, but strongly indicated further hikes were likely, surprising the markets with the possibility of rates above 5.5% by the end of 2023. Treasury yields increased sharply, reflecting these expectations. Given the market’s anticipation of additional Fed hikes, expectations of a soft landing for economic growth, and persistent inflation, the risk for interest rates in the coming months is skewed to the downside. If significant headwinds materialize, rates could decline sharply.

Spreads across short duration structured product sectors and quality ranges are in the 75th – 90th percentile relative to history, while short duration Corporate spreads are ~50th percentile. Compensation for risk is attractive at current levels, but if the economy slows more than expected, credit spreads have room to widen. Conversely, if the economy remains solid and achieves a soft landing, spreads could

Performance data quoted represents past performance, which is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than performance data given. **For performance information current to the most recent month-end, visit [TouchstoneInvestments.com/mutual-funds](https://www.touchstoneinvestments.com/mutual-funds).**

tighten further. Considering these risks, current valuations and strong carry support a modest overweight to risk in fixed income portfolios.

### Portfolio Review

The Touchstone Ultra Short Duration Fixed Income Fund (Class A Shares Load-Waived) outperformed its primary benchmark, the ICE BofA 3 Month Treasury Bill Index and outperformed its secondary benchmark, the ICE BofA 1 Year U.S. Treasury Note Index, for the quarter ended June 30, 2023.

Interest rates rose sharply across the yield curve with the largest increase occurring in 1 to 3 year maturities. In general, rates moved in a parallel fashion with maturities inside 10 years ranging from 40-80 basis points higher during the quarter. The Treasury curve from 2 years out to 30 years remains historically inverted at -104 basis points while the front end of the Treasury curve, though still inverted at -40 basis points, steepened sharply from its lows in early May as residual fears from the first quarter banking crisis ebbed.

The impact of higher interest rates was more than offset by tighter credit spreads in short duration sectors combined with the income provided by relatively high yields. Income generated by the portfolio remains significant and should provide a buffer going forward. Despite the impact of higher rates, the net asset value for the Fund rose during the quarter as rising yields were offset by the impact of price increases on very short discount bonds as they approach maturity.

The performance of the Fund's major sectors was good, as Non-Agency CMBS, Corporates, and Asset Backed Securities (ABS) outperformed their corresponding ICE BofA 0-2 year indices. Collateralized Loan Obligations (CLO) were the best performing sub-sector for the Fund.

Dispersion among the peer group was contained despite elevated volatility in rates and spreads. The difference between the 25th percentile-returning fund and the 75th percentile-returning fund was only -35 basis points. This is surprising and suggests that despite the overweight to structured products, the Fund and its peers seemed to be positioned similarly in terms of overall duration and credit risk.

Positioning changes were modest as cash increased from a recent low of portfolio assets, while ABS and Non-Agency CMBS decreased. Credit quality was unchanged at a weighted average rating of AA- for the Fund.

Duration positioning remains at the short end of the historical range at 0.5 years (similar to the prior quarter). Given the increase in short rates, strategies like that of the Fund with short duration and a higher concentration of floating rate securities performed better. We believe the broader peer group is positioned similarly to the Fund at about 0.5 years and received a similar contribution to returns.

The yield curve moved in a parallel fashion during the quarter and the overweight to shorter key rate durations likely contributed modestly to the Fund's returns.

### Outlook and Conclusion

Rate volatility remained high like it has since the Fed began raising rates over a year ago. Given macro uncertainty, we expect volatility to remain elevated (but not as high as first quarter levels) and spreads to remain wide. Businesses are feeling the impact of higher rates and bank-lending conditions have tightened, creating a challenging environment for corporate bonds. On the other hand, consumers remain in a strong position with unemployment low, strong wage growth and historically low debt burdens. The portfolio is positioned well for this environment with relatively low corporate exposure and a high allocation to structured products, much of which is ultimately tied to the performance of the consumer.

The Fund also maintains a significant exposure to Non-Agency CMBS, which has been under pressure with rising rates, and challenges in the retail and office segments of the market. While management is not concerned about impairment in this segment of the portfolio (most of the securities are AAA-rated with substantial credit enhancement), a greater number of commercial loans are moving into special servicing which could produce extension risk. We are maintaining our current positions, but will look to reduce exposure as prices recover and bonds mature.

CLOs, while secured by high yield bank loans, are one of the highest conviction (and highest returning) trades in the portfolio. These securities are floating rate, AAA-rated, with high credit enhancement levels and, perhaps most importantly, very low spread duration. We are monitoring loan performance closely and limit sector exposure to about half of typical sector limits.

We believe short rates are biased to rise and will remain higher for longer. The gross yield on the Fund is much higher than it was when the rate cycle began, meaning the Fund is better able to withstand these rising rates. Further, the yield on the Fund is likely to continue to increase as the floating rate securities reset to higher yielding benchmarks and as substantial monthly cash flow (maturities) are reinvested at increasingly higher rates. We expect to maintain our duration at about 0.5 years and maintain an overweight to floating rate securities.

Spreads on short duration securities have remained high, particularly in structured products, creating some of the best values we have seen in the Ultra Short Duration space. However, with the risk that the Fed will be unable to engineer a "soft landing" and a wide gulf in potential outcomes, we are avoiding over-risking the portfolio – both in terms of interest rate risk and credit risk. Given the historical attractiveness of even short duration, high quality assets, it makes sense to keep duration short, stay up in quality and still maintain a very high yield in the portfolio.

Performance data quoted represents past performance, which is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be higher or lower than performance data given. **For performance information current to the most recent month-end, visit [TouchstoneInvestments.com/mutual-funds](https://www.touchstoneinvestments.com/mutual-funds).** From time to time, the investment adviser may waive some fees and/or reimburse expenses, which if not waived or reimbursed, will lower performance. Performance by share class will differ due to differences in class expenses. Returns assume reinvestment of all distributions. Returns are not annualized for periods less than one year.

\*\*The performance presented for Class A, C, Y, INST and S Shares combines the performance of an older class of shares (Z Shares) from the Fund's inception, 03/01/94, with the performance since the inception date of each share class.

<sup>1</sup>The ICE BofA 3-Month U.S. Treasury Bill Index is an unmanaged index of Treasury securities maturing in 90 days that assumes reinvestment of all income.

<sup>2</sup>ICE BofA 1-Year U.S. Treasury Note Index is an unmanaged index comprised of a single issue purchased at the beginning of the month and held for a full month. The issue selected at each month-end rebalancing is the outstanding two-year Treasury Note Bill that matures closest to, but, not beyond one year from the rebalancing date.

The indexes mentioned are unmanaged statistical composites of stock market or bond market performance. Investing in an index is not possible. Unmanaged index returns do not reflect any fees, expenses or sales charges.

**A Word About Risk**

The Fund invests in fixed-income securities which can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. When interest rates rise, the price of debt securities generally falls. Longer term securities are generally more volatile. The Fund invests in mortgage-backed securities and asset-backed securities which are subject to the risks of prepayment, defaults, changing interest rates and at times, the financial condition of the issuer. The Fund invests in investment grade debt securities which may be downgraded by a Nationally Recognized Statistical Rating Organization (NRSRO) to below investment grade status. The Fund invests in U.S. government agency securities which are neither issued nor guaranteed by the U.S. Treasury and are not guaranteed against price movements due to changing interest rates. The Adviser engages a sub-adviser to make investment decisions for the Fund's portfolio; it may be unable to identify and retain a sub-adviser who achieves superior investment returns relative to other similar sub-advisers. Events in the U.S. and global financial markets, including actions taken to stimulate or stabilize economic growth may at times result in unusually high market volatility, which could negatively impact Fund performance and cause it to experience illiquidity, shareholder redemptions, or other potentially adverse effects. Banks and financial services companies could suffer losses if interest rates rise or economic conditions deteriorate. The Fund invests in foreign securities which carry the associated risks of economic and political instability, market liquidity, currency volatility and accounting standards that differ from those of U.S. markets and may offer less protection to investors. The Fund invests in municipal securities which may be affected by uncertainties in the municipal market related to legislation or litigation involving the taxation of municipal securities or the rights of municipal security holders in the event of bankruptcy and may not be able to meet their obligations. The Fund may experience higher portfolio turnover which may lead to increased fund expenses, lower investment returns and higher short-term capital gains taxable to shareholders. The Fund invests in repurchase agreements which are considered loans by the Fund and may suffer a loss of principal and interest in the event of counterparty defaults. The Fund invests in Collateralized Loan Obligations (CLOs) that have risks that largely depend on the type of underlying collateral and risks may include illiquidity, limited active market, the possibility that distributions from collateral securities will be insufficient to make interest or other payments, the potential for a decline in the quality of the collateral, and can bear the risk of default by the loans. Current and future portfolio holdings are subject to change.
