16 Describe the calculation of the change in basis and the data that supports the calculation, such as the market values of securities and the valuation dates ▶ The Fund total return of capital of \$224,394 was allocated to each share class by the proportion of dividends paid by each share class divided by the total dividends paid by the Fund for the fiscal period ended October 27, 2017. The percentage of dividend distributions deemed return of capital was then calculated by taking allocated return of capital for each share class divided by the total dividend distributions paid by the share class for the fiscal period ended October 27, 2017. Finally, the per share amount was calculated by taking the percentage calculated above times the dividend distributions per share for the year.
