

Executive Summary

- ▶ If it weren't for AI, we believe markets would be in a very different place today. What makes the current environment unusual is that market participation has broadened without a true broadening of the underlying growth engine. While several equity segments, including emerging markets, U.S. mid and small caps, and value-oriented stocks, have outperformed, much of that strength can still be traced back to AI-related exposure and second-order effects tied to the AI investment cycle.
- ▶ Importantly, the fundamentals supporting the AI theme remain strong. Earnings growth among the major beneficiaries has been exceptional, with visibility into spending plans and revenue growth extending well into 2027. The associated investment wave continues to support economic activity globally through demand for semiconductors, power infrastructure, industrial equipment, commodities, and data center construction.
- ▶ At the same time, AI-related investment has contributed to higher pricing across the supply chain, adding to elevated energy and food prices. Rates have moved higher in response. While we recognize rates could move modestly higher in the near term, we remain comfortable with our current positioning and believe that current yields appear attractive with a 12-month time horizon.

Asset Class	Weight	Change	Commentary
Fixed Income	Neutral	↓ (9/25)	We maintain a neutral stance as bonds continue to serve a critical strategic role as portfolio ballast and a source of stable income.
Duration	Slight Overweight	↑ (3/26)	We maintained a slight overweight duration stance. Within a diversified fixed income portfolio, this represents a move closer to the duration of the Bloomberg U.S. Aggregate Bond Index.
U.S. Taxable Investment Grade	Moderate Overweight	↓ (9/25)	We are tactically overweight corporate and securitized credit, drawn by higher yields and lower economic sensitivity, which offer appealing risk-adjusted return prospects relative to recent history.
U.S. Taxable Non-Investment Grade	Moderate Underweight	↓ (6/25)	We remain underweight high-yield bonds. Credit spreads remain near historic lows, while yield sits only modestly above the historical median. This suggests little cushion should inflation rates rise or economic growth falter.
Equities	Neutral	↑ (9/25)	We maintain a neutral allocation, reflecting a balance between risk and opportunity. We shifted to a domestic bias after incorporating a longer time frame for the conflict in Iran as we see U.S. equities as less exposed, though AI remains the most important driver.
U.S. LC Blend	Neutral	↓ (2/25)	Strong earnings and AI spending have supported stocks and assuaged fears of higher energy prices. 1Q earnings season has been one to celebrate, and estimates are rising.
U.S. LC Growth	Neutral	↑ (3/26)	We removed our underweight to Growth in March after valuations improved. AI remains a key earnings driver, though, risks persist given potential delays in data center construction and AI's potential to disrupt industries.
U.S. LC Value	Neutral	↓ (3/25)	Value equities face a more challenging backdrop if growth slows further, and prior sector-specific support in Healthcare and Financials have weakened. Energy sector exposure has provided a partial offset along with a number of AI related stocks (e.g. semiconductors).
U.S. Mid Cap	Slight Overweight	↓ (11/25)	We hold a slight overweight, supported by more attractive valuations and potential earnings growth. Within mid caps, we prefer high-quality companies with strong cash generation.
U.S. Small Cap	Neutral	↑ (9/25)	We have a neutral weight. Small caps enjoyed a strong ceasefire rally, though first-quarter earnings are coming in more mixed with weakness seen in the consumer sectors.
International Developed	Neutral	↑ (6/25)	Developed international equities are more exposed to the current energy shock, creating near-term risks to growth and margins. However, these headwinds are balanced by more attractive valuations and supportive policy dynamics, including increased defense spending. We maintain a neutral allocation.
International Emerging	Slight Underweight	↓ (3/26)	We maintained a slight underweight. With roughly 80% of the index concentrated in Asia, emerging markets are particularly exposed to energy disruptions and higher input costs. Even with a resolution, normalization may take time, supporting a more cautious near-term stance.

Diversification does not guarantee investment returns and does not eliminate the risk of loss. Diversification among investment options and asset classes may help to reduce overall volatility.

Touchstone Asset Allocation Guidance

Strategic: Strategic asset allocation is a baseline allocation between asset classes established with a longer term focus and congruent with an investor's investment goals and objectives. The allocation is meant to optimize the asset mix through methodical diversification in an attempt to maximize return and lessen risk.

Tactical: Tactical asset allocation is differentiated from strategic asset allocation by having a much shorter time horizon and the goal of adding alpha beyond what would be allowed through static strategic weights. Markets tend to be more volatile over shorter time horizons, while longer time frames tend to smooth out that volatility. That enhanced volatility in the short term creates the opportunity for either return enhancement and/or risk reduction by adding to or reducing weights of different asset classes.

Word About Risk

Fixed-income securities can experience reduced liquidity during certain market events, lose their value as interest rates rise and are subject to credit risk which is the risk of deterioration in the financial condition of an issuer and/or general economic conditions that can cause the issuer to not make timely payments of principal and interest also causing the securities to decline in value and an investor can lose principal. When interest rates rise, the price of debt securities generally falls. Longer term securities are generally more volatile. Investment grade debt securities may be downgraded by a Nationally Recognized Statistical Rating Organization to below investment grade status. Non-investment grade debt securities are considered speculative with respect to the issuers' ability to make timely payments of interest and principal, may lack liquidity and has had more frequent and larger price changes than other debt securities. Equities are subject to market volatility and loss. Growth stocks may be more volatile than investing in other stocks and may underperform when value investing is in favor. Value stocks may not appreciate in value as anticipated or may experience a decline in value. Stocks of large-cap companies may be unable to respond quickly to new competitive challenges. Stocks of small- and mid-cap companies may be subject to more erratic market movements than stocks of larger, more established companies. Investments in foreign, and emerging market securities carry the associated risks of economic and political instability, market liquidity, currency volatility and accounting standards that differ from those of U.S. markets and may offer less protection to investors. The risks associated with investing in foreign markets are magnified in emerging markets, due to their smaller and less developed economies.

Index Definitions

S&P 400® Index is an index that measures the performance of 400 mid-sized companies in the United States.

S&P 500® Index is a group of 500 widely held stocks and is commonly regarded to be representative of the large capitalization stock universe.

S&P 600® Index is an unmanaged index considered representative of U.S. small-capitalization stocks.

Bloomberg U.S. Aggregate Bond Index is an unmanaged index comprised of U.S. investment grade, fixed rate bond market securities, included in government agency, corporate and mortgage-backed securities between one and ten years.

Russell 1000 Index measures the performance of the 1000 largest companies in the Russell 3000 Index

Alpha is the portion of a fund's total return that is unique to that fund and is independent of movements in the benchmark
